EDUCATION

Thakur College of Engineering & Technology (TCET), Mumbai, India Oct 2024 – May 2027
Bachelor of Computer Applications (BCA)

TECHNICAL SKILLS

Languages: Python, JavaScript, C#, .NET, SQL, CSS, HTML.
Developer Tools: Git, GitHub, VS Code, Vercel, npm, Yarn, Vite, Webpack, Postman, SQL Workbench.
Concepts: REST APIs, Microservices, OOP's, RAG Pipeline.
Exposure: Node.js, React.js, Tailwind CSS.

EXPERIENCE

Research Head, Zephyr 2025 | TCET, Mumbai Aug 2025 – Oct 2025

- Owned research and content management lifecycle for 20+ events in TCET's annual technical fest; defined data collection standards adopted across 5 coordinating teams.
- Designed and maintained structured JSON schemas for event listings including title, pricing, registration metadata, and media fields integrated directly into the fest's production website.
- Maintained single source-of-truth for event metadata across CMS and website, eliminating duplicate entries and reducing manual correction overhead during publishing.

Software Development Intern — (In-House Training) | TCET, Mumbai Apr 2025 – May 2025

- Developed basic C++ applications and games including Tic-Tac-Toe as part of a structured training program.
- Practiced debugging & Troubleshooting, Program testing, and problem-solving using C++.

PROJECTS

Society Management System | React.js, Vite, Tailwind CSS, React Router (June 2026 – July 2026)

- Developed and designed responsive user interfaces for a multi-role residential society management platform.
- Created modules including Dashboard, Profile, Complaints, Maintenance, Visitors, Documents, and Notifications.
- Integrated and merged multiple frontend modules into a single application with consistent routing and reusable components.
- Optimized user experience through responsive layouts, clean UI design, and component-based architecture.

Weather App | React.js, JavaScript (ES6+), OpenWeatherMap API (March 2025 – April 2025)

- Built a weather forecasting web app that fetches real-time weather data via the OpenWeatherMap API based on user-entered city search.
- Designed a clean, responsive UI to display current temperature and weather conditions with minimal load time.
- Handled API integration and error states (invalid city, failed requests) for a smooth user experience.
